FORM CREATION

AIM

To create an application in Zoho Creator and design a Room Booking form for a hotel using different types of fields, and to submit and view the records stored through the form.

SOFTWARE / TOOLS USED

- Zoho Creator (Low-Code Application Development Platform)
- Web browser (Google Chrome / Microsoft Edge)

THEORY

Zoho Creator is a low-code platform used to build web and mobile applications with minimal coding. An application is a collection of forms, reports, pages and workflows. A Form is used to collect data from the user. It is made up of fields such as Name, Email, Number, Date, Dropdown, Radio, Checkbox and File Upload, which are added to the form builder by dragging them from the field palette. Each field has properties such as mandatory, unique values, placeholder text and default value. When a form is submitted, the data is stored as a record and is displayed in the report of that form.

FORM FIELDS

The form “Room_Booking” is created in the application “Hotel Room Booking” with the following fields:

Field Name	Field Type	Description
Guest_Name	Name	Full name of the guest
Email	Email	Email address of the guest
Phone	Phone Number	Contact number
Check_In_Date	Date	Date of arrival
Check_Out_Date	Date	Date of departure
Room_Type	Dropdown	Standard / Deluxe / Suite
Number_of_Guests	Number	Number of guests (default: 1)
Meal_Plan	Radio	Breakfast Only / Half Board / Full Board
Extra_Services	Checkbox	Airport Pickup / Spa / Extra Bed
Special_Requests	Multi Line	Any special request from the guest
ID_Proof	File Upload	Scanned copy of the guest ID proof

PROCEDURE

1. **Create the application:** Sign in to Zoho Creator, click Create Application → Create from scratch, enter the application name as “Hotel Room Booking” and click Create.

2. **Create a new form:** Inside the application, click Create Form → Start from scratch (Add Form) and enter the form name as “Room_Booking”. The form builder opens with an empty canvas and the field palette on the left.

3. **Add the guest detail fields:** Drag the fields Name, Email and Phone Number from the palette onto the canvas. Rename their labels as Guest_Name, Email and Phone.

4. **Add the date, choice and number fields:** Drag two Date fields (Check_In_Date and Check_Out_Date), a Dropdown field (Room_Type, choices Standard, Deluxe, Suite), a Number field (Number_of_Guests) and a Radio field (Meal_Plan, choices Breakfast Only, Half Board, Full Board).

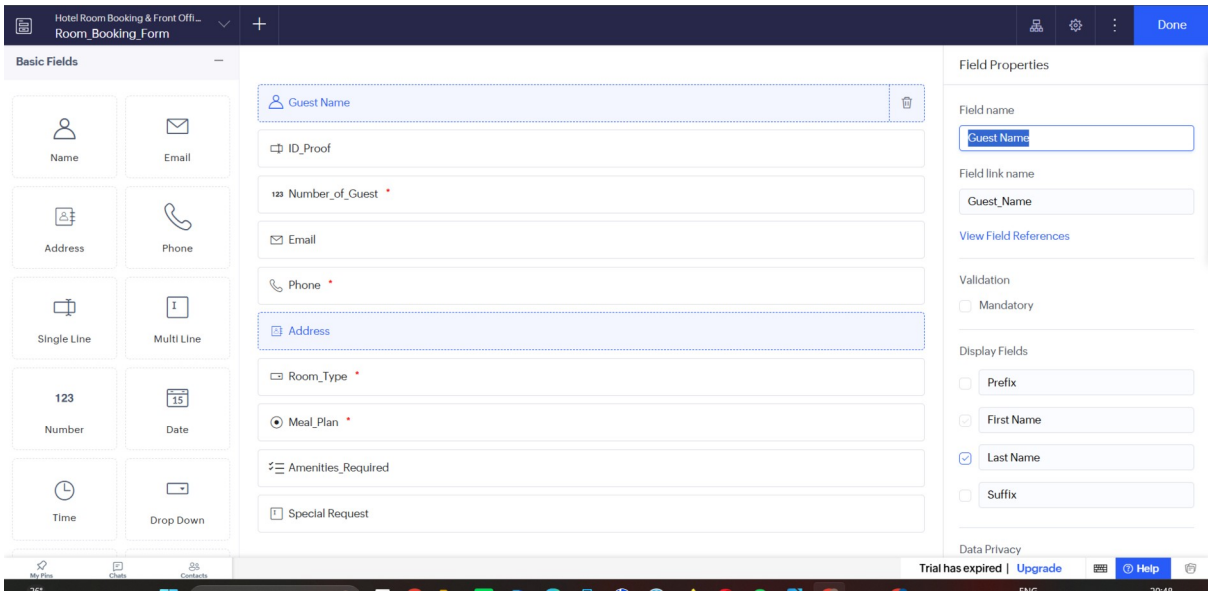

5. **Add the remaining fields:** Drag a Checkbox field (Extra_Services, choices Airport Pickup, Spa, Extra Bed), a Multi Line field (Special_Requests) and a File Upload field (ID_Proof). Note that the Submit and Reset buttons are added to the form by default.

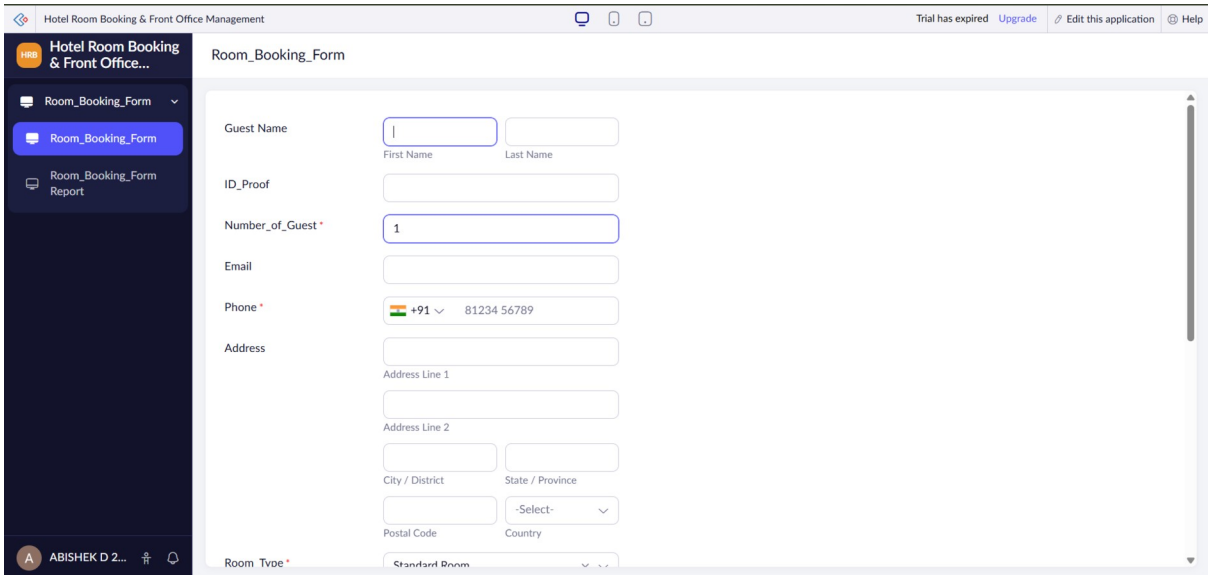

6. **Set the field properties:** Open the properties of each field. Mark Guest_Name, Phone, Check_In_Date, Check_Out_Date and Room_Type as Mandatory, set the default value of Number_of_Guests as 1, and add placeholder text or help text where required.

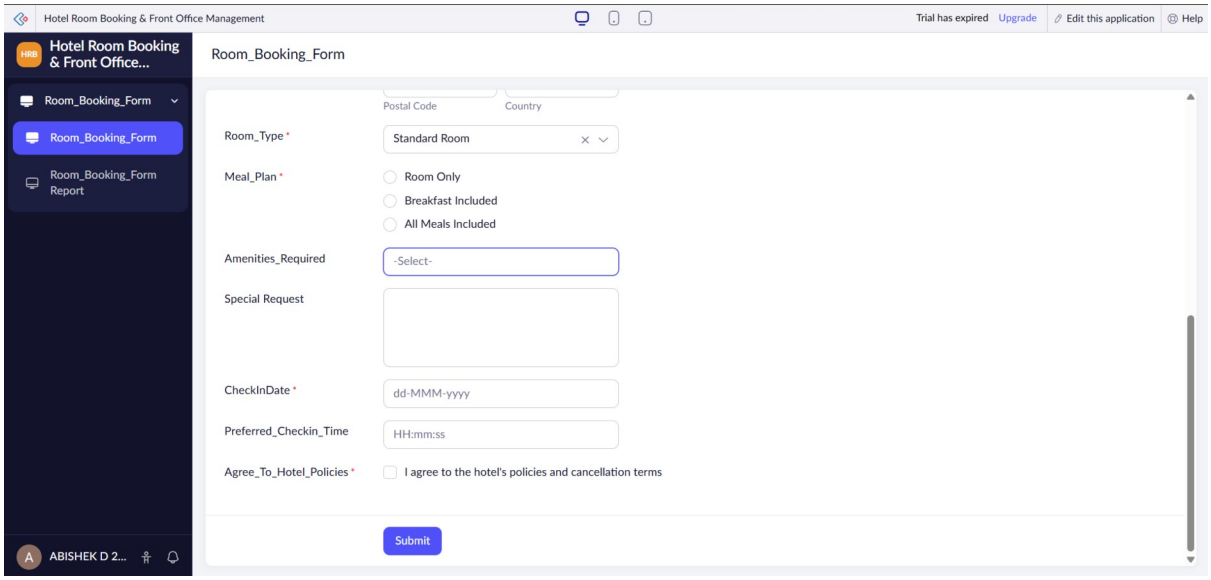

7. **Save and run the application:** Click Save, then Access Application to open the application in live mode and open the Room_Booking form.

8. **Submit sample data:** Enter sample booking details in all the fields and click Submit. Repeat for one or two more bookings.

9. **View the records:** Open the report of the form (Room_Booking Report) and verify that the submitted records are displayed.

RESULT

Thus, the application “Hotel Room Booking” and the form “Room_Booking” were created in Zoho Creator using different types of fields, and the submitted records were viewed successfully.
